

ABSTRACT OF THE DISCLOSURE

The present invention provides a data accumulation system wherein data storage process is simplified by using a portable communication device such as a notebook type PC 5 as a data storage device. The data accumulation system of the invention comprises a pen scanner 21 as a data output device, a notebook type PC 22 as a data storage device and a portable terminal 23 as a data checking terminal. The pen scanner 21 reads a character string or the like in a 10 document as an image and sends data of the image to the note PC 22. The note PC 22 generates thumbnail image data of the image data and sends the data to the portable terminal 23. When the thumbnail image is displayed on a display of the portable terminal 23, a user watches it and 15 checks whether or not the data are worth storing. If the user decides to store the data, the user input a storage command from the portable terminal 23 to the note PC.
